### Comments from Cooperative Extension Service County Agents

“Much needed rain fell in parts of the county. Other parts are still dangerously dry. Some lucky producers were able to get a second cutting of hay, but the yield and quality is down compared to a normal year. Producers are still selling off cattle due to a lack of stored forages and lack of pasture.”

- Olivia Foster, Carroll County

“Rice was heading, and rice stink bug scouting continued. Soybeans were being scouted for pod feeding worms, but only a few fields have been sprayed. Most of the corn irrigation has been terminated with just a few late fields still needing irrigation. Pastures and hay fields are showing stress from the drought and heat.”

- Richard Klerk, Faulkner County

“Scattered rainfall occurred in areas while irrigation continued where no precipitation occurred. Pod worm pressure continued to increase in soybeans. Early rice was being drained and corn was maturing rapidly. Hay fields and pastures continue to show signs of drought.”

- Brent Griffin, Prairie County

“Soybean fields were being sprayed for corn earworms. Rice fields were heading. Rice stink bug numbers remain low. Pastures and hay fields are showing stress from the lack of rain.”

- Kevin Lawson, Perry County

“All crops continued to be irrigated. Early corn is getting close to having irrigation terminated. Insect pressure remained low during the week with the exception of some rice fields which were treated for stink bugs. Forages continue to decline with lack of moisture. Hay production is still running behind on most farms.”

- Mike Andrews, Randolph County
